Notify Physician and consider increasing iNO when:
- \( \text{PaO}_2 \) is < 60mmHg or greater than a 10% decline and \( \text{FiO}_2 \) needs > 0.5
- Greater than a 10% decline from goal \( \text{SpO}_2 \)

Weaning of iNO to be discussed daily in rounds
RT to obtain OI prior to placing patient on iNO and with every assessment. Patient response may be determined by:
- \( \text{SpO}_2 \) within goal limits
- \( \text{PaO}_2 \) > 60 mmHg
- Decrease in OI
- PA Systolic pressure estimated to be <40% systemic

Wean iNO by 5ppm Q4 hours until delivering 5ppm
Wean by 1ppm Q1 hour until off

Able to wean \( \text{FiO}_2 \) ≤ 0.6

Patient responded to iNO within 30 mins?

Discontinue iNO
Continue with current iNO dose
