

# Hyperbilirubinemia Pathway

Inpatient  $\geq$  35 Weeks Gestational Age (GA)

<sup>α</sup> **Neurotoxicity risk factors:**

- Gestational age < 38 weeks
- Serum albumin concentration < 3.0 g/dL
- Isoimmune hemolytic disease (+DAT), G6PD deficiency, or other hemolytic conditions
- Sepsis
- Significant instability in last 24 hours

<sup>β</sup> **Measure G6PD activity if:**  
Unclear etiology of hyperbilirubinemia AND

- TSB increases despite PTX
- TSB increases after an initial decline
- Escalation of care is required
